

AC/DC Input Module Configurator

v1.2

Release Description

DATE: 2023-07-17

FEATURE ENHANCEMENTS

- Removed warning when setting full scale current to 1 Amp or above.

CORRECTIONS TO ISSUES

- Minor: Fixed issue where the tool was not installed in the “Program Files (x86)/ERLPhase” folder by default. Older versions must be manually uninstalled before installation of v1.2.

COMPATIBILITY

401027 AC/DC Input Module Firmware	v2.1 and below
------------------------------------	----------------

Minor releases, designated with a revision or letter (e.g. v3.4 Rev 1 or v3.4a), maintain the same compatibility as their base version (e.g. v3.4 Rev 0 or v3.4).

REVISION HISTORY

v1.1 – 2023-04-25

- Initial release for general availability.

v1.0 – 2021-12-17

- Beta release. Not for general availability.

CLASSIFICATION OF CHANGES MADE

The issues fixed in software / firmware upgrades are classified as defined below. While the decision to upgrade installed products is the user's, these classifications provide a guideline for the need and priority of the upgrade.

Enhancement: Feature enhancements add a capability or extend existing capabilities of the product. Upgrades for such changes need be made only if and when that feature enhancement is desired.

Critical: Critical changes fix issues/problems that prevent the basic operation of the device and have no workaround. Critical changes merit a product upgrade as soon as possible, if that function is being used under the conditions causing the issue

Major: Major changes fix problems that prevent the basic operation of the device but do have a workaround. Any major changes merit a product upgrade as soon as possible if the function is being used under the conditions causing the issue and a workaround is not acceptable.

Minor: Minor changes fix non vital issues that do not prevent the basic operation of the device and may or may not have a workaround. Product upgrades for such changes are not necessary unless they apply to and are needed by the user.
