REVISION HISTORY

v2.2 – 2021-04-30

- Enhancement S-PRO 4000 (Model 4001): Reduced the minimum allowable setting of the Main and Auxiliary Voltage detectors down to 0.1% from 1%, with a resolution of 0.1%.
- Enhancement S-PRO 4000 (Model 4001): Updated the default setting file to disable LEDs from ProLogic settings.

v2.1a – 2016-01-04

- Enhancement: Enhanced error checking when opening setting files.

CLASSIFICATION OF CHANGES MADE

The issues fixed in software / firmware upgrades are classified as defined below. While the decision to upgrade installed products is the user's, these classifications provide a guideline for the need and priority of the upgrade.

Critical: Critical changes fix issues/problems that prevent the basic operation of the device and have no workaround. Critical changes merit a product upgrade as soon as possible, if that function is being used under the conditions causing the issue

Major: Major changes fix problems that prevent the basic operation of the device but do have a workaround. Any major changes merit a product upgrade as soon as possible if the function is being used under the conditions causing the issue and a workaround is not acceptable.

Minor: Minor changes fix non vital issues that do not prevent the basic operation of the device and may or may not have a workaround. Product upgrades for such changes are not necessary unless they apply to and are needed by the user.

Feature Enhancement: Feature enhancements add a capability or extend existing capabilities of the product. Upgrades for such changes need be made only if and when that feature enhancement is desired.
